

# ASSIGNMENT 1: GRAPH TRAVERSAL

Tasks:

1. Implement a graph using adjacency matrix representation
2. Implement DFS traversal on the graph
3. Implement BFS traversal on the graph
4. Do the task 1-3 above using the adjacency list representation of the graph
5. Use both DFS and BFS traversals (separately) for searching a node on the graph

Note: your DFS and BFS code should work with any node in the graph given as a starting node
